

5W 2700 mAh Power Supply with USB Charging
w/ Optional Fuel Gauge & CAN Bus

Li Ion Cell, Charger IC, Protection IC & Optional Fuel Gauge IC

Populate R14 instead of R16 and R17 if host MCU is not present.

BQ24074 Charge Controller w/ Power Path

Place decoupling capacitors as close to power pins as possible.

BQ24074 Decoupling Capacitors

EN pin settings

EN2	EN1	INPUT CURRENT
0	0	100mA
0	1	500mA
1	0	Set by ILIM
1	1	Standby

BQ29728 Cell Protection Circuit

Q2 is a PMOS being used for polarity protection.

Li Ion Cell

R23 serves as a jumper for when the BQ27427 Fuel Gauge is not populated.

BQ27427 Fuel Gauge

Title: Li Lion Power Module w/ Optional Fuel Gauge & CAN Bus

Size: USLetter Date: 2026-06-25

KiCad E.D.A. 10.0.4

Rev: RevA

Id: 2/6

Boostbuck Regulator & Optional 3v3 LDO

For 5v output, 3v3 LDO must be placed in series via populating R34.

TPS63020 Power Supply Regulator

Place decoupling capacitors physically as close as possible to their corresponding pin.

TPS63020 Decoupling Capacitors

Voltage output is set by R29: 768k resistor for 3v3 ouput 1.2M resistor for 5v

TPS63020 Voltage feedback divider

TPS63020 PG00D Pullup

TPS63020 PS Pulldown

MCU

CAN Bus Interface

CAN Controller

MCP2515 CAN Controller

Place near VDD, with the smallest value nearest VDD.

MCP2515 Decoupling Capacitors

Place as close to OSC pins as possible.

MCP2515 Oscillator Circuit

CAN Transceiver

SN65HVD230 CAN Transceiver

Place near VCC, with the smallest value nearest VCC.

SN65HVD230 Decoupling Capacitor

Place as close to
SN65HVD230 as possible.

SN65HVD230 EMI Filtering & Termination

Connectors
